EUNCTION: MEDIATES THE EXPORT OF FIXED CARBONS FROM THE CHLOROPLASTS INTO THE CYTOSOL IN THE FORM OF TRIOSE PHOSPHATES. SUBUNIT: HOMODIMER (BY SIMILARITY).

SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. LOCATED IN SUBCELLULAR EDUCATION: INTEGRAL MEMBRANE PROTEIN ENGRALE OF THE CHLOROPLAST.

SUBLITARITY: STRONG, TO OTHER PLANTS CIPT. ALSO SIMILAR TO YEAST PROTEIN SIX41.

CAUTION: WAS ORIGINALLY THOUGHT TO FUNCTION AS A CHLOROPLAST RECEPTOR.

"Anomalies in amino acid sequences of small cytochromes c and cytochromes c' from two species of purple photosynthetic bacteria.";

Nature 278:661-662(1979).

-!- EUNCTION: CYTOCHROME C2 IS FOUND MAINLY IN PURPLE, NONSULFUR, PHOTOSYNTHETIC BACTERIA WHERE IT FUNCTIONS AS THE ELECTRON DONOR TO THE OXIDIZED BACTERICHLOROPHYLL IN THE PHOTOHOSPHORYLATION PATHWAY. HOWEVER, IT MAY ALSO HAVE A ROLE IN THE RESPIRATORY CHAIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CTAA_BACSU Length: 306

gene

pseudohermaphroditism.";
Eur. J. Endocrinol. 139:330-333(1998).
1- FUNCTION: FAVORS THE REDUCTION OF ANDROSTENEDIONE TO TESTOSTERONE.
USES NADPH WHILE THE TWO OTHERS EDH1/B ENZYMES USE NADH.
-!- CATALYTIC ACTIVITY: ESTRADIOL-17-BETA + NADP(+) = ESTRONE +

NADPH.

PATHWAY: LAST ENZYME OF THE TESTOSTERONE BIOSYNTHESIS.

DISEASE: DEFECTS IN EDH17B3 GIVE RISE TO MALE PSEUDOHERMAPHRODISM (MPH): THESE 46,XY INDIVIDUALS HAVE UNAMBIGUOUS EMMALE EXTERNAL GENITALIA AT BIRTH, BUT FAIL TO MENSTRUATE AT THE TIME OF EXPECTED PUBERTY AND INSTEAD VIRILISE AS EVIDENCED BY GROWTH OF THE PHALLUS, BREAST DEVELOPMENT MAY OR MAY NOT TAKE PLACE.

SIMILARITY: BELONGS TO THE SHORT-CHAIN DEHYDROGENASES/REDUCTASES FAMILY (SDR). 17-BETA-HSD 3 SUBFAMILY.

"Carboxyethyllysine in a protein: native carbonyl reductase/NADP(+)-

Proc. Natl. Acad. Sci. U.S. A. 90:502-506(1993)

-!- FUNCTION: CATALYZE THE REDUCTION OF A WIDE VARIETY OF CARBONYL COMPOUNDS INCLUDING THE ANTITUMON FANTHRACYCLINE ANTIBLOTICS.

CAN CONVERT PROSTAGLANDIN E2 TO PROSTAGLANDIN E2-ALPHA.

-!- CATALYTIC ACTIVITY: R-CHOH-R' + NADPH+) - R-CO-R' + NADPH-

-!- CATALYTIC ACTIVITY: (5Z.13E)-(15S)-9,11,15-TRIHYDROXYPROSTA-5,13-

DIENOATE + NADPH.

- STATUTTY NOTHER (5Z.13E)-(15S)-11,15-DIHYDROXYPOSTA-5,13-

DIENOATE + NADPH.

Identification of genes and regulation.";
J. Biol. Chem. 270:15598-15606(1995).
I- PATHWAY: BIOSYNTHESIS OF D-ALANYL-LIPOTEICHOIC ACID.
I- SUBCELLULAR LOCATION: CYTOPLASMIC (PROBABLE).
I- SIMILARITY: TO 3-OXOCYL-[ACYL-CARRIER PROTEIN] REDUCTASES.
I- SIMILARITY: BELONGS TO THE SHORT-CHAIN DEHYDROGENASES/REDUCTASES
FAMILY (SDR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GLASER P., KUNST F., ARNAUD M., COUDART M.P., GONZALES W.,

ROYAL STRESS and heat shock induce a human gene encoding a protein-tyrosine phosphatase.",

Nature 359:644-647(1992),

I FUNCTION: DUAL SPECIFICITY PHOSPHATASE THAT DEPHOSPHORYLATES INTUSED BEACH THR-183 AND TYR-185.

I CATALYTIC ACTIVITY: PROTEIN TYROSINE PHOSPHATE + H(2)O = PROTEIN TYROSINE + DESPRIATE STRESS AND HEAT SHOCK.

INDUCTION: BY OXIDATIVE STRESS AND HEAT SHOCK.

TYROSINE PHOSPHATASE FAMILY. DUAL SPECIFICITY SUBFRMILY.

TYROSINE PHOSPHATASE FAMILY. DUAL SPECIFICITY SUBFRMILY.

FUNCTION: DUAL SPECIFICITY PHOSPHATASE THAT DEPHOSPHORYLATES NEUTRINGSINE PROSPHATE H(2)0 =

CATALYTIC ACTIVITY: PROTEIN TYROSINE PHOSPHATE.

PROTEIN TYROSINE ORTHOPHOSPHATE.

SIMILARITY: BELONGS TO THE MON-RECEPTOR CLASS OF THE PROTEIN-

TYROSINE PHOSPHATASE FAMILY. DUAL SPECIFICITY SUBFAMILY.

TYROSINE PHOSPHATASE FAMILY. DUAL SPECIFICITY SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         OR CL100
